## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-51 and 63-66, drawn to an objective for inspecting a specimen including an immersion liquid, classified in class 359, subclass 366. (Note: Although claim 51 is a process claim, it is directed only to structure in the apparatus and therefore is grouped with the apparatus.
  - II. Claims 52-62, drawn to a variable focal length optical system, classified in class 359, subclass 434.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in a combination without the particulars of the other subcombination. See MPEP § 806.05(d).
3. These inventions are distinct for the reasons given above. Further, the search required for Inventions I and II is not coextensive and these inventions have acquired a separate status in the art because of their separate classification and/or recognized divergent subject matter. Therefore, restriction for examination purposes as indicated is proper.

Art Unit: 2872

4. This application contains claims directed to the following patentably distinct species of the claimed invention:

**If the applicant elects Invention I, a further election is required as set forth:**

Species A: Fig. 3 – Nine element objective, .95 NA, corrected over a bandwidth from 266-436 nm, field size 0.15 mm

Species B: Fig. 4 – Nine element objective, 1.0 NA, corrected over a bandwidth from 266-436 nm, field size 0.15 mm

Species C: Fig. 5 – Nine element objective, 1.0 NA, corrected over a bandwidth from 190-196 nm, field size 0.15 mm

Species D: Fig. 6 – Ten element objective, 1.2 NA, corrected over a bandwidth from 190-196nm

Species E: Fig. 7 – Eleven element objective, 1.1 NA, corrected over a bandwidth from 266-436 nm, field size 0.15 mm

Species F: Fig. 8 – Eight element objective, 1.2 NA, corrected over a bandwidth from 190-198 nm, field size 0.05 mm

Species G: Fig. 9 – Nine element objective, corrected for .17mm cover glass

**If the applicant elects Invention II, a further election is required as set forth:**

Species Y: figure 11 – a “figure 4” geometry

Species Z: figure 12 – a “trombone” geometry

Art Unit: 2872

5. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 20 appear to be generic to species A-C.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. A telephone call was not made to applicant's representative to request an oral election to the above restriction requirement because of the complexity of the restriction requirement.

Art Unit: 2872

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lee Fineman whose telephone number is (571) 272-2313. The examiner can normally be reached on Monday - Friday 7:30 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
